

SPECTRUM'S BIO-CLEAN + BIO-GUARD PROGRAM FOR CONSTRUCTION

Incorporating AEGIS Microbe Shield® during construction, renovation or maintenance projects protects the health of the structure and its inhabitants in many ways. Spectrum's Bio-Clean and Bio-Guard programs can be customized to your needs and concerns, with special consideration given to:

WOOD (INCLUDING FRAMING, DECKING & FENCING)

Save money and time by treating all wood to mitigate the growth of algae, mould and fungi. The application can be done on new materials, or on those already affected by the elements (such as water damage) to reduce the need for replacement and the associated cost. All treated wood lasts longer and stays cleaner.

DRYWALL & OTHER POROUS BUILDING MATERIALS

Stop fixing drywall damage and staining. Instead, prevent the problems in the first place. Treatment with AEGIS Microbe Shield® will prevent the growth of mould, mildew, and fungi.

ATTICS & CRAWLSPACES

AEGIS Microbe Shield® prevents mould, mildew and fungi from taking hold in unseen areas.

CEMENT, CONCRETE & MORTAR

Any materials that may grow mould, mildew, algae or other stains can benefit from treatment. It's not just for cosmetic reasons. Spectrum's Bio-Clean + Bio-Guard program helps prevent concrete surfaces from becoming dangerously slippery. And research has also shown that microbial-influenced corrosion is also inhibited by treatment, extending the life of your project.

SPECTRUM'S BIO-CLEAN + BIO-GUARD PROGRAM FOR CONSTRUCTION

Incorporating AEGIS Microbe Shield® during construction, renovation or maintenance projects protects the health of the structure and its inhabitants in many ways. Spectrum's Bio-Clean and Bio-Guard programs can be customized to your needs and concerns, with special consideration given to:

ROOFING, GUTTERS & EAVESTROUGHS

Algae, mould and fungi can stain or rot roofing material. They can also create blockages in gutters and eavestroughs. Luckily, our environmentally friendly coating prevents these microbes from getting a foothold, without harming humans (so they're safe to use on roofs that collect rainwater).

CLADDING & SIDING

Even cladding made of vinyl, aluminum, steel or composite materials can become stained by algae, mould and mildew. Spectrum's Bio-Guard program can prevent discolouration.

CARPETS

Wool, polypropylene, nylon or polyester? All carpets can harbour and incubate harmful microbes! AEGIS Microbe Shield® attaches to all textiles by wrapping its protectant around the strands of the fibres, providing ongoing protection. The AEGIS Microbe Shield® treatment allows you to protect your floor coverings - keeping them fresh without the use of harmful chemicals.

HVAC

With every breath you take, the presence and spreading of harmful microbes can make you sick. We work with you to keep your building's environment safe and clean by treating all components of your HVAC system, including ducts, heating and cooling equipment, and air mixing units. Applied once a year, all the surfaces of your HVAC system will be protected from microbes.
