

SPECTRUM'S BIO-CLEAN + BIO-GUARD PROGRAM FOR STORES

From the smallest corner grocery store to the largest shopping mall, retail stores all have numerous areas of highly concentrated traffic flow and high touch surfaces that can transmit viruses and other microbes. Spectrum's Bio-Clean and Bio-Guard programs can be customized to your needs and concerns, with special consideration given to:

HIGH TOUCH SURFACES

Obvious hot zones may include doorknobs, handrails, entrance touch screens, keyboards, and elevators. It's essential these surfaces are disinfected through the Spectrum Bio-Clean program and protected with AEGIS Microbe Shield® through our Bio-Guard treatment. The application of this environmentally friendly, durable, invisible and odorless coating won't affect performance and will protect everyone from microbes 24/7/365.

WASHROOMS & FITTING ROOMS

Defense is the best offense! From toilet handles and faucets, to benches and fitting rooms, it's essential all surfaces are regularly disinfected and annually protected with AEGIS Microbe Shield®. The durable and invisible barrier prevents the spread of microbes (including odour-causing bacteria) without the ongoing use of harsh-smelling chemicals.

FOOD DISPLAYS & FOOD COURTS

The growth of unsightly bacteria, mould, fungi and algae can hurt sales and be costly to remove. Prevent their development in the first place with an annual AEGIS Microbe Shield® application. Treated surfaces will retain their antimicrobial ability, even with repeated cleanings.

HVAC

With every breath you take, the presence and spreading of harmful microbes can make you sick. We work with you to keep your building's environment safe and clean by treating all components of your HVAC system, including ducts, heating and cooling equipment, and air mixing units. Applied once a year, all the surfaces of your HVAC system will be protected from microbes.
