

SPECTRUM'S BIO-CLEAN + BIO-GUARD PROGRAM FOR TRAVEL & TOURIST ATTRACTIONS

As people travel, viruses and other microbes catch free rides on their bodies, clothes and belongings. These microbes can then transfer to numerous surfaces throughout your property. To maintain a healthy environment, Spectrum's Bio-Clean and Bio-Guard programs can be customized to your needs and concerns, with special consideration given to:

PLANES, TRAINS & AUTOMOBILES... +BUSES, SUBWAYS, SHIPS, TRANSPORTATION TERMINALS AND MORE

From subway poles to jet tray tables, the Spectrum's Bio-Guard Program with AEGIS Microbe Shield® has been proven to prevent hazardous microbes on public transit, and to provide enduring protection over time. The growth of bacteria, mould and fungi can stain and deteriorate seating and other assets while producing a foul odour. Regularly scheduled Bio-Cleaning with an annual AEGIS Microbe Shield® application protects your investment, even in high traffic areas.

HIGH-TOUCH SURFACES

Obvious hot zones may include doorknobs, handrails, shared phones, touch screens, keyboards, elevators, toilet handles, and faucets. It's essential these surfaces are disinfected through the Spectrum Bio-Clean program and protected with AEGIS Microbe Shield® through our Bio-Guard treatment. The application of this environmentally friendly, durable, invisible and odorless coating won't affect performance and will protect everyone from microbes 24/7/365.

ATTRACTIONS

Mould, fungi and algae can cause millions of dollars in damage to artwork, museum displays or heritage buildings. AEGIS Microbe Shield® can invisibly protect any asset and eliminate the cost of restoration required after damage by microbes.

CARPETS

Wool, polypropylene, nylon or polyester? All carpets can harbour and incubate harmful microbes! AEGIS Microbe Shield® attaches to all textiles by wrapping its protectant around the strands of the fibres, providing ongoing protection. The AEGIS Microbe Shield® treatment allows you to protect your floor coverings - keeping them fresh without the use of harmful chemicals.

HVAC

With every breath you take, the presence and spreading of harmful microbes can make you sick. We work with you to keep your building's environment safe and clean by treating all components of your HVAC system, including ducts, heating and cooling equipment, and air mixing units. Applied once a year, all the surfaces of your HVAC system will be protected from microbes.
